

Connectors

# Hoff-Trex® Piggyback Connectors

TPC Wire & Cable's Hoff-Trex® Piggy-back connectors are used in electrical wiring to create additional connections without cutting or splicing into the original wire. They are commonly used in various electrical applications to add or branch off from existing electrical circuits. They attach two female quick disconnect terminals to a single terminal. Often used in automotive and marine applications.

**Ratings** 300V Temperature Options up to 148°C

**Engineered to Resist** Tension

**Features & Benefits**

**Nylon and Vinyl Options**  
Suit the Demands of Various Operations.

**Solderless**  
Ease of use and installation.

**Color-Coded by AWG Size**  
Ease of identification.

**Multi-Connection**  
Lack of cutting or splicing makes for quicker installation.

**Ordering Information** For complete product ordering information, please scan the QR Code or contact your TPC sales representative
